Program 2

WAP to convert a given valid parenthesized infix to arithmetic expression to postfix expression. The expression consists of single character operands and the binary operators + (plus), - (minus), * (multiply) and / (divide).

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

```

```
        case '+':
```

```
        case '-': return 2;
```

```
        case '*':
